

### 3. Government Report: United Nations 2.0

---

**Date: November 2, 2141**

---

**Subject: Annual Report on Space Colonization**

---

The United Nations 2.0 presents its annual report on space colonization, highlighting the progress and challenges of human settlements on the Moon and Mars.

#### **Key Highlights:**

- **Lunar Colony:** Established in 2135, the lunar colony has grown to a population of 50,000. It serves as a hub for scientific research and resource extraction, with lunar ice being converted into water and oxygen.
- **Martian Colony:** The Martian colony, founded in 2138, now houses 20,000 inhabitants. Terraforming efforts are underway, with genetically engineered plants being introduced to create a sustainable atmosphere.
- **Orbital Habitats:** Multiple orbital habitats orbiting Earth provide living spaces for over 100,000 individuals, featuring advanced life-support systems and artificial gravity.

Challenges include maintaining psychological health in isolated environments and developing more efficient propulsion systems for interplanetary travel.
